

REMOTE CAISSON OBSERVATION

GME was founded in 1981 to provide engineering, consulting, and testing services to architects, engineers, developers, government agencies, owners, and contractors. No longer can caisson inspectors “Ride the Ball” to the bottom of the caisson. With the “SeeSnake,” we can observe the bottom and videotape the entire process.

“SeeSnake” fiberoptic viewer attached to Kelly bar, with lighting

The observation is conveniently and quickly carried out

Lowering the Kelly bar past the upper casing

Observing the bottom in real time, and video-taping the event with the built-in VCR
